

Assignment 0

NAME: FATEMA-TUZ-ZOHORA SANANDA

ID : 180042124

DEPT : CSE

PROGRAM: SWE

COURSE : CSE 4553 – MACHINE LEARNING

5 Applications of Machine Learning in Software Engineering:

1. We can apply Machine Learning for **Detecting the repeating line or unnecessary & unused variables and methods** from a code snippet.
2. In Facebook, there's a feature **"Automatic Face detection"** while uploading photo which is based on Machine Learning's algorithm.
3. By Machine Learning's algorithm, we can **Convert a code snippet written in java into another language like C++ or python.**
4. It's possible to ensure the **Fraud detection (Fake id, Fake accounts)** while developing a software by Machine Learning algorithm.
5. We can also **Write a code by converting voice into text.** Which is basically Machine Learning's Voice recognition algorithm.
